

Sales Performance Dashboard Report

1. Introduction

Sales analytics plays a critical role in helping businesses understand revenue performance, customer behavior, and sales trends. This project analyzes transactional sales data and presents the results through an interactive dashboard that highlights product category performance, revenue contribution, payment preferences, and monthly trends.

2. Objectives

The objectives of this analysis are to:

- Understand overall performance and revenue generation
- Identify high performing and underperforming categories
- Analyze sales performance across product categories
- Examine customer's preferred payment method
- Support data-driven sales and pricing decisions

3. Dataset Overview

The dataset consists of sales transaction records containing Products ID, User ID, Discount, Category, Final Price and Purchase Date.

The Key metrics derived from the dashboard includes;

- Total Revenue: ₹752,378
- Total Orders: 3,660
- Average Discount: 18.83%

These metrics indicate active customer engagement and show the influence of discounts on overall sales performance.

4. Data Cleaning and preparation

Data cleaning and preparation were carried out directly in Excel to ensure the data was accurate and ready for analysis.

The following steps were performed:

- Checked and handled missing values
- Removed duplicate transaction records
- Standardized category and payment methods names
- Ensured price, discount and revenue were in the correct date formats
- Created calculated columns for Month and Year

- Built pivot tables and measures for revenue, order count and average

5. Key Insights

Overall Sales Performance

Total revenue reached ₹752,378 from 3,660 orders, indicating steady sales activity. An average discount rate of 18.83% shows that promotions play a significant role in driving customer purchases.

Sales Performance Category

Home and kitchen recorded the highest order volume, while clothing generated the highest revenue, suggesting higher transaction values. Electronics underperformed in both sales and revenue.

Revenue Contribution By Category

Revenue is concentrated in a few categories, with Clothing contributing the largest share, highlighting the importance of focusing on high-value categories.

Payment Method Preferences

While orders were fairly evenly distributed, Credit Cards and UPI contributed the highest revenue, indicating higher-value transactions through digital payments.

Monthly Revenue Trends

Revenue showed clear seasonal patterns, with distinct peak and low-performing months throughout the year.

6. Recommendations

- High order volume does not always translate into high revenue; strategies should focus on increasing average order value
- Strong performance in the Clothing category suggests maintaining or expanding investment
- Underperforming categories such as Electronics may require pricing reviews or targeted promotions
- Encouraging digital payment methods can help drive higher-value transactions
- Seasonal patterns should guide promotional planning and pricing strategies

7. Conclusion

The sales dashboard provides a clear and practical view of what's driving sales performance, how customers behave and where data-driven decisions can improve overall business outcomes.
